Personal Profile

Self-motivated and versatile Software Development graduate from Coventry University with a Bachelor's and Master's degree. A goal-oriented individual pursuing a career in Web Development with a passion for creating attractive, interactive and, responsive websites and mobile applications, committed to high standards of user experience, usability and speed. Excels in HTML, CSS, and JavaScript development. Lends detailed knowledge of SEO to increase visibility.

I'm currently searching for a front-end developer role that'll give me exposure to using markup languages like HTML to create user-friendly web pages, collaborate with back-end developers and web designers to improve usability etc.

I recently completed my Masters in Software Development and was exposed to a wide range of cutting-edge technologies and programming languages, which have equipped me with the skills and knowledge necessary to succeed as a software developer. To end off my master's degree I decided to create a mobile application using Flutter and Dart on VS Code. Using APIs to bring to life the maps element in the application and MongoDB to store any information which was logged into the application.
